

List of figures

Figure 1-1 Elementary (open-loop) Control System	16
Figure 1-2 Feedback control system block diagram	16
Figure 1-3 Fuzzy logic based control system – block diagram [3].....	24
Figure 2-1 PD type fuzzy controller	31
Figure 2-2 PID type fuzzy controller	32
Figure 2-3 (a) Crisp set vs. FS (b) A typical FS with set parameters [20].....	33
Figure 2-4 Triangular fuzzy MF [20].....	34
Figure 2-5 Trapezoidal MF [20]	35
Figure 2-6 Gaussian MF [20].....	35
Figure 2-7 Probability density function based MF [35].....	36
Figure 2-8 S-function fuzzy membership function [43]	36
Figure 2-9 MFs obtained for different confidence levels [35].....	39
Figure 2-10 Effect of changing single control point. (a) before change (b) after change [43].....	44
Figure 2-11 Predefined MFs [55]	45
Figure 2-12 optimized MFs [55].....	46
Figure 2-13 Membership function (a) before optimization, (b) after optimization [57].....	48
Figure 2-14 left-hand s-curve membership function	53
Figure 2-15 Normal triangular MF	56
Figure 2-16 Predefined triangular MFs.....	57
Figure 2-17 Displaced MF	58
Figure 2-18 Flowchart for GA based optimization.....	61
Figure 3-1 (a) Forces acting on pendulum system and (b) Computer control for real-time DPCS [93]	66
Figure 3-2 Real-time DPCS system available in Control theory and simulation lab, UPES	67
Figure 3-3 Fuzzy logic control for DPCS	68
Figure 3-4 FS for error in pendulum angular position.....	68
Figure 3-5 Displaced FS “Zero”	69
Figure 3-6 Simulation model for inverted pendulum system	70

Figure 3-7 Parameters for simulation model	71
Figure 3-8 Real-time PID control for DPCS [93].....	72
Figure 3-9 Pendulum angle for PID controller	72
Figure 3-10 Cart position for PID controller	73
Figure 3-11 Control force for PID controller.....	73
Figure 3-12 Pendulum angle for fuzzy logic controller.....	75
Figure 3-13 Cart position for fuzzy logic controller.....	75
Figure 3-14 Control force for fuzzy logic controller	76
Figure 3-15 Pendulum angle for optimized fuzzy logic controller.....	77
Figure 3-16 Cart position for optimized fuzzy logic controller.....	78
Figure 3-17 Control force for optimized fuzzy logic controller	78
Figure 3-18 Pendulum angle response comparison for PID, FLC and optimized FLC	79
Figure 3-19 cart position comparison for PID, FLC and optimized FLC.....	80
Figure 3-20 control force comparison for PID, FLC and optimized FLC.....	81
Figure 3-21 Swing up stabilization response (a) Precup's controller [94] (b) proposed controller response	82
Figure 3-22 Swing up stabilization comparison of (a) Takagi-Sugeno FLC based on Lypaunov's direct method [95] (b) proposed controller response....	84
Figure 3-23 Swing up stabilization comparison of (a) proposed controller response with (b) Takagi-sugeno FLC response [96]	85
Figure 3-24 Settling time comparison of proposed controller with reference controllers	85
Figure 4-1 Forces acting on TRMS [97].....	88
Figure 4-2 (a) Real-time DPCS system available in Control theory and simulation lab, UPES (b) Connection block diagram for TRMS setup [97] ...	91
Figure 4-3 Fuzzy logic control for TRMS	92
Figure 4-4 FS for pitch angle and yaw angle error	92
Figure 4-5 FS for error in pendulum angular position.....	94
Figure 4-6 Simulation model for twin rotor MIMO system	94
Figure 4-7 Parameters for simulation model	95
Figure 4-8 PID controller response for (a) 0.4 radian change pitch angle, (b) 0.5 radian change in yaw angle.....	97

Figure 4-9 PID control response for periodic change in set – point of (a) Pitch angle (b) Yaw angle	98
Figure 4-10 FLC response (a) step change of 0.4 radians for Pitch angle (b) step change of 0.5 radians for Yaw angle	100
Figure 4-11 FLC response for dynamically changing (a) Pitch angle set – point , (b) Yaw angle set – point	101
Figure 4-12 Optimized FLC response (a) step change of 0.4 radians for Pitch angle (b) step change of 0.5 radians for Yaw angle.....	103
Figure 4-13 Optimized FLC response for dynamically changing (a) Pitch angle set-point (b) Yaw angle set-point.....	104
Figure 4-14 (a) Pitch angle response for a step change of 0.4 radians (b) Yaw angle response for a step change of 0.5 radians.....	105
Figure 4-15 (a) Pitch angle response (b) Yaw angle response.....	107
Figure 4-16 Pitch angle set-point tacking response (a) proposed controller (b) reference controller [38]	109
Figure 4-17 Yaw angle set-point tacking response (a) proposed controller (b) reference controller [38]	110
Figure 4-18 Architecture of hybrid Fuzzy-PID controller for coupled TRMS [99].....	111
Figure 4-19 Pitch angle set-point tacking response (a) proposed controller (b) reference controller [99]	113
Figure 4-20 Yaw angle set-point tacking response (a) proposed controller (b) reference controller [99]	113
Figure 4-21 Rise time and settling time comparison of proposed controller with reference controllers for pitch angle response	114
Figure 4-22 Peak overshoot comparison of proposed controller with reference controllers of pitch angle response	115
Figure 4-23 Rise time and settling time comparison of proposed controller with reference controllers for yaw angle response	115
Figure 4-24 Peak overshoot comparison of proposed controller with reference controllers of pitch angle response	116
Figure 5-1 Magnetic levitation of steel ball.....	118

Figure 5-2 Real-time magnetic levitation model available in Control theory and simulation lab, UPES	119
Figure 5-3 Forces acting on steel ball	120
Figure 5-4 Fuzzy logic control for Magnetic levitation system.....	121
Figure 5-5 Initial FS for error	121
Figure 5-6 FS of position error for set “ze”	122
Figure 5-7 Simulation model for magnetic levitation system.....	124
Figure 5-8 PID control for magnetic levitation [104].....	124
Figure 5-9 PID controller response for step change in ball position	125
Figure 5-10 PID controller response for sinusoidal change in ball position..	126
Figure 5-11 FLC response for step change in ball position	126
Figure 5-12 FLC response for sinusoidal change in ball position	127
Figure 5-13 Optimized FLC response for step change in ball position	128
Figure 5-14 FLC response for step change in ball position	128
Figure 5-15 Performance comparison for PID, FLC and optimized FLC for step changes in desired position.....	129
Figure 5-16 Performance comparison for PID, FLC and optimized FLC for sinusoidal change in desired position	130
Figure 5-17 Architecture of alpha-beta filter FLC.....	131
Figure 5-18 Step change in ball position response for (a) proposed controller (b) reference controller [105].....	132
Figure 5-19 Decomposed fuzzy PID controller	133
Figure 5-20 Decomposed fuzzy PID controller	133
Figure 5-21 Step change in ball position response for (a) proposed controller (b) reference controller [105].....	134
Figure 5-22 Overshoot comparison of proposed controller with reference controllers	135
